

Red Arrow Logistics is a logistics supplier for the U.S. Department of Energy (DOE) Hanford Tank Waste Treatment and Immobilization Plant (WTP). When the project is completed, WTP will be the world's largest radioactive waste treatment plant and process and stabilize 56 million gallons of radioactive and chemical waste currently stored at the Hanford Site.

Movement of infrastructure materials can make or break your project.

In our rapidly changing world, transportation quality is increasingly pivotal in delivering the goods and services necessary to keep our infrastructure running smoothly. New ways of improving efficiencies for the agencies that provide and manage highways, transit systems and our built environment are crucial. At Red Arrow Logistics, we embrace the multi-faceted challenges facing the construction industry every day.

Your turnkey solution, from project management, shipment coordination and vendor compliance.

We have a proven track record in handling all types of cargo, in all types of situations. In fact, we make it a practice to treat every delivery as if it were mission critical, an approach that has served us, and our clients, well. The result is that we can now claim one of the highest on time ratings in the industry. As well as being known for firm budgets that don't budge, stretch or come with surprises.

Providing productivity gains through supply chain excellence.

If you require a logistics partner with extensive expertise in transporting over dimensional cargo, heavy equipment and other specialized construction materials, you've come to the right place. Our robust technology platform provides event management and visibility throughout the supply chain. And our people provide a diligence and integrity not easily found today. So if you want to move forward with speed and efficiency like never before, call Red Arrow Logistics.
